

Chapter 3: Polar Covalent Bonds; Acids and Bases

Concepts to Review from General Chemistry:

- ✓ Electronic Structure
- ✓ Molecular Orbitals and Atomic Orbitals
- ✓ Bonding and Antibonding
- ✓ Lewis, Condensed, or Kekule Structures
- ✓ Determining Formal Charge
- ✓ Resonance!!

Today –

- Brønsted-Lowry Acids and Bases
- Organic Acids and Bases
- Acid Dissociation Constants - pK_a and pH
- Lewis Acids and Bases –
 - Nucleophiles and Electrophiles

Acids and Bases: pH and pKa

- ▶ Acid-Base reactions are some of the most common in organic chemistry.
- ▶ They are very important in biochemistry and medicine.

Remember ->

- ▶ Acidity depends on medium.
- ▶ We'll always think of H₂O as standard, but often acids are less dissociated in organic solvents.

Acids and Bases: pH and pKa

- ▶ is a species that can donate a proton.
- ▶ is a species that can accept a proton.

Acids and Bases: pH and pKa

Remember from General Chemistry:

- ▶ The acidity of an aqueous solution is determined by the concentration of H_3O^+ ions.
- ▶ Water Autoprotolysis Constant, $K_w = 1.00 \times 10^{-14}$ at 24°C
- ▶ In a neutral solution, $[\text{H}_3\text{O}^+] =$

Acids and Bases: pH and pKa

Acids and Bases: pH and pKa

- ▶ In order to compare the reactivity of acids - what we need is a way to quantify their acid strengths.
- ▶ We can do this using the equilibrium constant for this reaction.

in H_2O , $[\text{H}_2\text{O}] = \text{Constant, } 55 \text{ Molar (M)}$

Acids and Bases: pH and pKa

- ▶ K_a s typically range from 10^{14} to 10^{-50} in value.

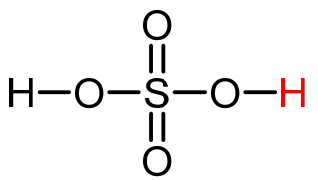

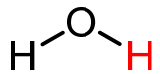

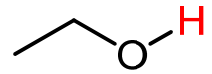

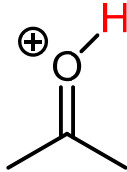

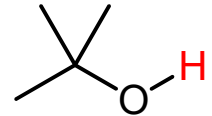

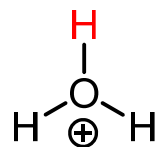

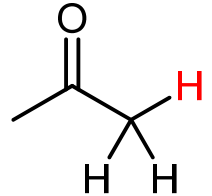

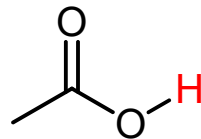

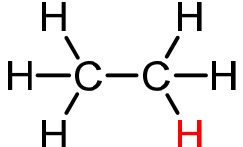

$$pK_a = -\log K_a$$

- ▶ Low or negative pK_a means strong acid →
- ▶ High pK_a value means weak acid →

Typical values:

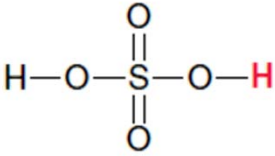

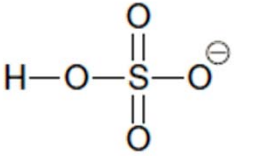

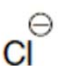

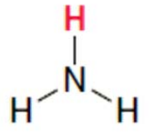

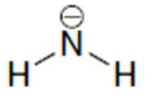

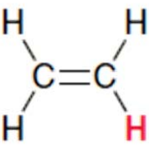

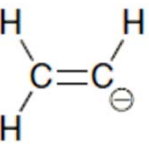

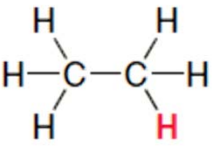

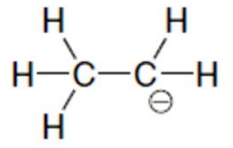

- ▶ Strong Acid
- ▶ Organic Acid
- ▶ Organic Compound

Quantifying Acidity and Basicity – Acidity

ACID	pK _a	ACID	pK _a
	-9		15.7
	-7		16
	-2.9		18
	-1.74		19.2
	4.75		50

- ◆ There are more acids and pK_a values in Table 3.1.
- ◆ Each pK_a unit represents an order of magnitude or a power of 10.
 - Which is stronger, HCl or H₂SO₄, and by exactly HOW MUCH?

Quantifying Acidity and Basicity – Basicity

	ACID	pK_a	CONJUGATE BASE	
Strongest acid		-9		Weakest base
		-7		
		38		
		44		
Weakest acid		50		Strongest base

◆ You can also use pK_a values to compare the strengths of bases:

- The stronger the acid the weaker its conjugate base. WHY?

Acids and Bases: pH and pKa

- ▶ Strong reacts to give weak.
- ▶ For an Acid-Base Reaction, the equilibrium lies toward the acid with the higher pKa, the predominant species at equilibrium.

Acids and Bases: pH and pKa

The pH indicates the concentration of hydrogen ions (H^+)

$$pK_a = pH + \log \frac{[HA]}{[A^-]}$$

The Henderson–Hasselbalch Equation

Acids and Bases: pH and pKa

For a Strong Acid -

Hydrogen ion concentration, $[H^+]$, can be calculated using the following formula:

$[H^+] = 10^{-pH}$ Hydroxide ion concentration,

Acids and Bases: pH and pKa

Factors Influencing Acidity:

1. Electronegativity -.

ACIDITY H-CH_3 $<$ H-NH_2 $<$ H-O-H $<$ H-F

Increasing Acidity

STABILITY $\text{}^-\text{CH}_3$ $<$ $\text{}^-\text{NH}_2$ $<$ $\text{}^-\text{O-H}$ $<$ $\text{}^-\text{F}$

Increasing Stability

Acids and Bases: pH and pKa

Factors Influencing Acidity:

2. Polarizability -

ACIDITY H-F < H-Cl < H-Br < H-I

Increasing Acidity

STABILITY F⁻ < Cl⁻ < Br⁻ < I⁻

Increasing Stability

Acids and Bases: pH and pKa

Factors Influencing Acidity:

3. Hybridization -

Acids and Bases: pH and pKa

Factors Influencing Acidity:

4. Inductive effects –

Increasing acidity

Acids and Bases: pH and pKa

Factors Influencing Acidity:

5. Conjugation or "Resonance"

Consider acetate anion $[\text{CH}_3\text{COO}]^-$

$\text{CH}_3\text{CH}_2\text{O}^-$

Acids and Bases: pH and pKa

Factors Influencing Acidity:

6. Stability of A^- (A^- = the conjugate base)

Factors that influence stability of conjugate bases (anions) are:

- Size
- Electronegativity
- Resonance

Acids and Bases: pH and pKa

- ▶ A Lewis Acid is.
- ▶ A Lewis Base is

- ▶ Since a Lewis acid is a species that accepts electrons,
- ▶ A Lewis base is a species that donates electrons to a nucleus with an empty (or easily vacated) orbital,

For Next Time.....

- ▶ Monday is a HOLIDAY
- ▶ WEDNESDAY Finish Chapter 3 (3. 5 – 3.8)
- ▶ Friday Start Chapter 4 (4.1 – 4.5)
 - ▶ BRING YOUR MODEL SET!
